C8000	All the laser printers are not support
M9215, 9218	
LC60125MST	
NEC	
SuperScript 660plus	

Q : Why doesn't my printer work with my PrintServer?

A : Many kinds of printers are **not** suitable to network printing. They include Host-based, sometimes referred to as GDI*, PPA*, CAPT* and low duty cycle printers. They are designed for home uses that are not intended for support on a traditional network. In addition, several HP OfficeJet are not designed for or supported on networks.

*: GDI (**G**raphical **D**evice **I**nterface)
PPA (**P**rinting **P**erformance **A**rchitecture)
CAPT (**C**anon **A**dvanced **P**rinting **T**echnology)

Host-based. A printer that relies on the computer's CPU to transform the print job. Most host-based printers use the GDI interface built into Windows (hence the "GDI printer" term), so there is no need to convert the data to PostScript, PCL, or other printer language.
Some HP DeskJet printers are PPA printers. With this new printing system, the printer handles only basic printer functions while the printer software on the computer handles the formatting. The software driver handles all formatting, such as color matching and correction, half-toning, edge enhancement, tone correction, and ink management.

Some of the Canon laser printer comprehensive job control via Canon Advanced Printing Technology (CAPT) driver software including voice guidance, Toner Saver and Automatic Image Refinement modes.
The printer design with Low Duty Cycle is to prevent the printer heating, in high volume network printing, this function will let the printserver buffer overflow, so that this kind of printer can print fine in the beginning, but not for a long time.
Furthermore, some of the printers listed below may work on a network, but **only when they are connected to the parallel port of a Windows computer that has the correct printer driver installed** and printer sharing properly configured.
Contact the support group for you specific printer for details.

Hewlett-Packard PPA or host-based printers:
Deskjet 710C printer
Deskjet 712C printer
Deskjet 720C printer
Deskjet 722C printer
Deskjet 820Cxi or 820Cse printer
Deskjet 825C
Deskjet 1000C printer
Deskjet 1000Cxi printer

Deskjet 1000Cse printer

Original Photosmart photo printer (C3804A)

LaserJet 3100 product

LaserJet 1000 product family

The following printers are not supported on traditional networks:

HP Deskjet 900 series

930C / 932C / 935C / 940C / 950C / 952C / 959C

HP Deskjet 800 series

810C / 812C / 830C / 832C / 840C / 842C / 880C / 882C

NOTE: HP does not recommend the use of the HP Deskjet, HP Deskjet Plus, HP Deskjet 300, 400, 500, and 600 series printers, or the HP Deskjet 850C series printers for shared, high volume printing. These printers have a low duty cycle and are not designed for high volume network printing.

The models listed below are not designed or supported on networks.

HP Officejet 300

HP Officejet 500

HP Officejet 600

HP Officejet 700

HP Officejet K60

HP printer/scanner/copier 370/380

HP printer/scanner/copier (HP PSC) 700/900

HP Officejet V

The following printers are not supported on traditional networks. They are supported on home PNA networks using a Jetdirect Home PNA print server (which has since been discontinued).

• HP Deskjet 930c, 932c, 935c

• HP Deskjet 950c, 952c

• HP Deskjet 810c, 812c

• HP Deskjet 830c, 832c, 840c, 842c

• HP Deskjet 880c, 882c

You can find some GDI printer information from Hewlett-Packard.
